true stones

ATLANTIC STONE

rhyolite
China

Hard and Natural

The natural elegance of this Chinese rhyolite is unmistakable. Atypical for granite is not only its strikingly high compactness, but also the special exterior. Compared to other stones of its kind, Atlantic Stone has a lighter base tone and differently strong veins, which have developed over the course of millions of years under the influence of pressure and heat.

The bluish-grey base tone, which can vary in intensity, fits perfectly into modern architecture, but is also perfectly for an elegant atmosphere. Its structure varies from fine to thicker veins. Each slab has its own character, like a piece of art made by Nature.

Thanks to its exceptionally high degree of hardness and acid resistance, this material is also very suitable for kitchen worktops and many other applications, both indoors and outdoors.

technical properties

apparent density	162-164 lb/ft ³
open porosity	1.6%
compressive strength	34026 psi
flexural strength	4859 psi
moisture absorption	0.5%
abrasion resistance	0.63 in
petrographic examination	rhyolite
constituents	≈80% Matrix ≈10% Feldspar ≈5% Plagioclase ≈3-5% Quartz
